# The *Danfoss Link™* App gives you constant indoor comfort

**Jörgen likes his new remote heating control system so much, he's started to install it for his customers**

Jörgen Osbäck takes more than a personal interest in the heating system installed in his sunny home in Uddevalla on the coast of south-west Sweden. As the owner of a heating installation company, he's keen to learn about the latest heating technology that he can recommend to his customers.

"It doesn't matter which room I enter, the temperature is practically always at the temperature I have set."

So when he was introduced to the new *Danfoss Link™* App, he didn't hesitate for a moment.

"We've had a Danfoss heating system for a long time and changed to *Danfoss Link™* as soon as it came on the market. Now we've been using the *Danfoss Link™* App for about six months. The big difference I've noticed is the comfort. The indoor temperature has become remarkably constant," Jörgen says.

#### Visible benefits

He likes the fact that it's easy to use and that he can see both the temperature settings and the actual room temperatures on his phone. In that way,

Jörgen thinks the *Danfoss Link™* App is a 'cool gadget'.

Once the temperatures are set, he can sit back, relax and enjoy reliable heating comfort along with his partner Jenny and their two children, aged six and 12.

"You don't have to knock on the system or do anything with it. The system 'exercises' the radiator valves every week and that contributes to the stable indoor temperature. Open window detection is also a great benefit as it means you can open a window in the middle of winter and avoid having the system on full heat. "It doesn't matter which room I enter, the temperature is practically always at the temperature I have set."

#### Inevitable cost savings

Jörgen hasn't yet had a chance to look at the heating bill and make a comparison. But, as a heating installer, he is convinced that the constant temperature and automatic valve exercising function have reduced his household energy consumption.

Over the past six months, he has demonstrated the *Danfoss Link™* App to a number of his customers. He has installed a few new heating systems as a result. When he's needed help along the way, the support provided by Danfoss has been very good.

#### The Osbäck family's heating system comprises:

- 16 Danfoss *living connect®* thermostats so the temperature in each room can be individually set.
- 2 room sensors, which measure the temperature in the rooms
- A *Danfoss Link™* Central Controller with Wi-Fi, which provides wireless control of all radiator thermostats. Studies have documented average energy savings of up to 30% in homes with a *Danfoss Link™* system installed
- The *Danfoss Link™* App, enabling remote regulation of individual room temperatures from any location
- The *Danfoss Link™* App Helpdesk, which provides technical support for Wi-Fi and app-related questions

# Three good reasons to choose Danfoss

Danfoss provides intelligent, energy-efficient heating solutions for your home. Our products increase comfort, reduce heating bills and make your heating system easier to manage. With more than 80 years of experience, innovation and development, we can offer you the best solutions for the perfect indoor climate.

**1** Intelligent solutions that optimise indoor climate and comfort

**2** Reduce heating expenses and reap the benefits of an energy-efficient home

**3** Intuitive and user-friendly products tailored to your lifestyle
